

Connecting Over Bluetooth – Windows Mobile – C++

This sample application demonstrates how to discover and connect to a Zebra printer over Bluetooth from a Windows Mobile device. Both the Zebra printer and the Windows Mobile device must be capable of connecting over Bluetooth for the application to work properly.

The application was developed using MS Visual Studio 2008 with the Windows Mobile 6 SDK. The application was tested on Windows Mobile 6.1 and requires the Microsoft Bluetooth stack. This application is provided AS-IS, for example purposes only.

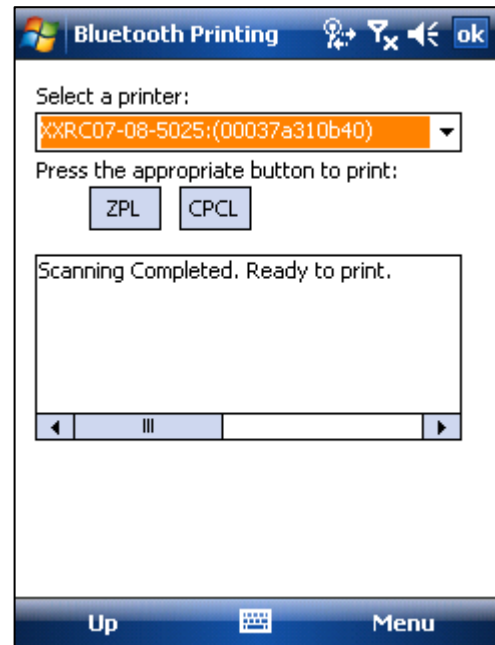

When the application starts up, it will automatically scan for Bluetooth devices within the area.

The right asset. In the right place. At the right time.

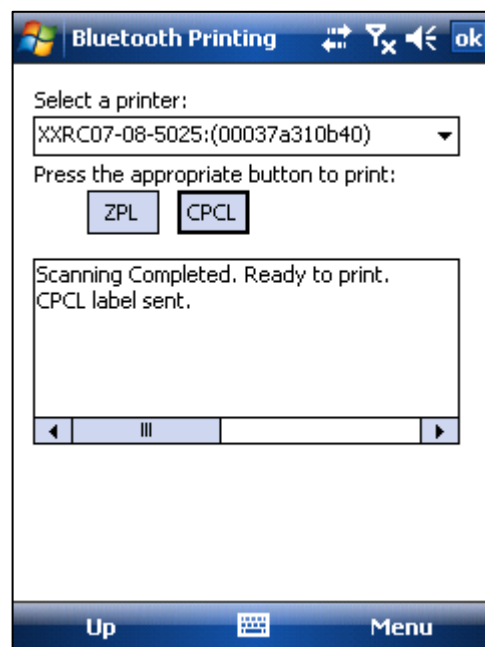

After the application completes its Bluetooth Scan, it will populate the discovered devices in the “Select a printer” drop-down menu. The “ZPL” and “CPCL” buttons will also become enabled.

The right asset. In the right place. At the right time.

Depending on the language your printer uses, tap either the “ZPL” or “CPCL” button. The message box below will display the status of the label sent. The printer will then print a test label.

The right asset. In the right place. At the right time.
